Chrysler Group – LATCH Anchorage Weight Limits

Updated: August 8, 2013

For all Chrysler Group LLC vehicles, the LATCH system (lower anchors and top tether) can be used to secure a child restraint until the combined weight of the child and the child restraint is 65 lbs (29.5 kg).

Except for the vehicles listed below, the seat belt and tether anchor can be used together to secure a child restraint until the combined weight of the child and the child restraint is 65 lbs (29.5 kg). Use the seat belt without the tether once the combined weight is more than 65 lbs (29.5 kg).

For the following vehicles, the seat belt and tether anchor can be used together to secure a child restraint up to the maximum child weight allowed by the child restraint manufacturer:

Make	Model	Model Years
